

SmartCOMM™ VoIP

Voice and Internet over a high-speed connection... Its brilliant. We didn't invent it, we're just doing it better. Voice over IP cuts your costs, boosts reliability and makes things more efficient on your end. It just makes sense.

SIP Trunking

Session Initiation Protocol (SIP) manages all traffic between your IP enabled phone system, the Grid4 network and the Public Switched Telephone Network (PSTN).

SIP can help you get the most from your IP phone system by:

- Reducing the recurring costs of separate voice and data circuits
- Boosting network capacity without the expense of additional T1 circuits
- Eliminating the cost of purchasing, supporting and maintaining a media gateway
- Increasing available bandwidth because SIP eliminates the protocol conversions

Save Money

Enjoy the cost savings of converging your local, long distance and broadband Internet services onto a single circuit with dynamic bandwidth allocation.

Save Time

Dedicated and knowledgeable technicians, installation teams and customer support specialists assure rapid deployment.

Smarter Simplicity

Experience the efficiency of managing a single network connection, receiving one bill and engaging one point of contact for all your local, long distance and Internet services.

Protect your Investment

Preserve your existing capabilities through seamless integration with your current PBX system.

24/7 Support

Around the clock support from Grid4's world-class customer care team.

VoIP Features

- Unlimited Local Calling & IntraLATA Toll Calling
- Competitive Domestic Long Distance Rates
- High Speed Internet
- Call Forwarding & 3-Way Calling
- Caller ID Name & Number
- Accounting Codes
- Static IP Addresses
- Voicemail/Unified Messaging
- Toll Free Number
- Free Directory Assistance Calls
