

SmartCOMM™

# WIRELESS BROADBAND

Gigabit Internet solution delivering maximum, carrier-grade SLA backed bandwidth.

## THE SOLUTION

Wireless broadband is an ultra-reliable and affordable business Internet solution.

Wireless broadband uses wireless radio technology to transmit data over the air via private links at speeds up to 1.5Gbps.

### Wireless Benefits

#### Guaranteed Speed

SLA-backed 99.99% uptime delivers gigabit speeds suited for mission critical voice and data services.

#### High Efficiency Bandwidth

Dedicated bandwidth delivered over private links with extremely low latency.

#### Quick Installation

Complete installation of wireless broadband in 7 to 10 business days as opposed to the months often required for a fiber installation.

#### MPLS Enabled

Can be seamlessly integrated with SmartCOMM™ VoIP, SIP Trunks and SmartCOMM™ Hosted IP Complete. Each link is private and secure.

#### Cost Effective

20-40% savings compared to fiber with no construction costs.

#### Scalable Speeds

Can be easily increased with a few keystrokes. Pay for the bandwidth you need today, knowing you can easily add capacity when you need it.

### Network Security

#### AES (Advanced Encryption Standard)

An over-the-air link encryption option that uses the Rijndael algorithm and 128-bit keys to establish a higher level of security than DES. AES products are certified as compliant with the Federal Information Processing Standards (FIPS 197) in the U.S.A.
